

# TradeLine TRM240 M-Class Vacuum

Numatic

## COMPLIANCE Meets Clean

- » The UK's No.1 Vacuum Brand
- » Designed and Built in the UK
- » Market-Leading Reliability and Durability
- » Built for tough use in Construction and Trade

# Get Your Facts Right

Numatic

Around **39,000** people each year suffer from respiratory health issues due to inhaling dust particles.

The HSE published figures which states that around **8,000** people each year in the UK alone lose their life due to cancer caused by inhaling hazardous dust particles at work. HSE also estimates that around **4,000** people die every year from COPD linked to work. Construction workers are one of the at-risk groups within this because of the dust that they breathe.

Let's put that number into perspective: in the UK in 2023, 1,633 people were killed in road traffic accidents.

Therefore, you're almost **5 times** more likely to die from harmful dust inhalation at work than you are in a car crash.

# What is the Importance?

Dust is a silent killer, and over exposure can have a number of harmful effects on health, including:

- Respiratory problems: Dust can irritate the lungs and airways, leading to respiratory problems such as asthma, bronchitis, and pneumonia.
- Skin problems: Dust can irritate the skin, causing rashes, dermatitis, and other skin conditions.
- Eye problems: Dust can get into the eyes, causing irritation, redness, and inflammation.
- Cancer: Some types of dust can be carcinogenic, meaning that they can cause cancer.

# What is an M-Class Vacuum?

M-class dust extraction helps to protect workers from the harmful effects of dust by capturing the smallest dust particles. This helps to keep the air clean and safe to breathe.

Suitable for light or medium Hazard applications, an M-Class Industrial Vacuum Cleaner is a vacuum cleaner that has been designed to limit the risk of exposure to the operator of potentially harmful dusts which over time may present a risk of occupational disease.

The filtration system needs to capture at least **99.9%** of dust.

# What is the Difference Between L, M & H Class?

>99% Final Filter Efficiency

**General dust, Mixed dusts, Gypsum**

>99.9% Final Filter Efficiency

**Soft/ Hard woods, Paint, Plastics, Concrete, Brick, Ceramic**

>99.995% Final Filter Efficiency

**Asbestos, Lead, Carbon, Tar, Formaldehyde, Mould, Bacteria, Copper, Nickel**

For guidance only. Find out more at [www.hse.gov.uk/construction](http://www.hse.gov.uk/construction)

An M-Class vacuum is the legal minimum requirement advised by the HSE for vacuuming 'medium risk' hazardous dusts and is legally binding under COSHH (Control of Substances Hazardous to Health).

It's the law to use no less than an M-Class Vacuum on **any** construction site. The consequences of being found guilty of health and safety errors can include imprisonment in the most serious cases, as well as disqualification as a company director for up to 15 years. HSE **finest of up to £20,000** are common, and in cases of serious negligence they can be unlimited.

# Target Customer

Numatic

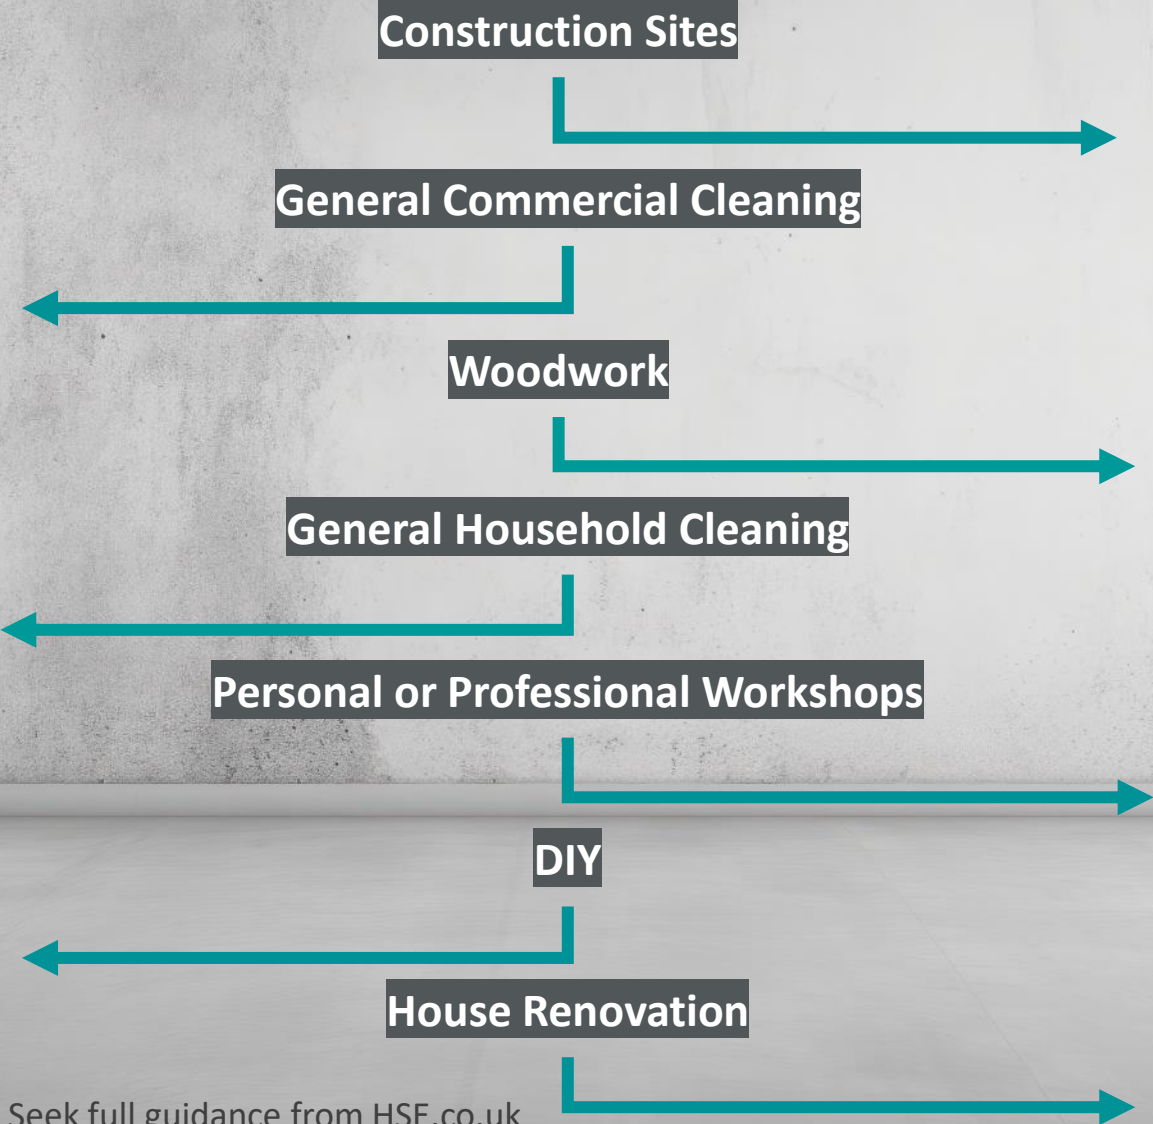

The focus for the TRM240 is to target those in the construction/ trades industry who are currently using a Henry/Numatic equivalent or sweeping for the removal of harmful dusts.

Education is key to highlight the importance to health as well as the laws and legislations required.

# What Vacuum do you Require?

Numatic

For guidance only dependant on type of dust. Seek full guidance from HSE.co.uk

# Screwfix NSR240(NRV240) Users – Reviews

Numatic

## Numatic is the No.1 choice for trades, but we need to educate them to choose M-Class

### DIY'er

"Just had new kitchen installed and need things put back on the wall involving drilling holes in plastered surfaces. Fed up of **brick and plaster dust** when drilling. Decided to buy Xtra-hand and a new vacuum to go with it. Brilliant choice. Vacuum holds Xtra-hand in place and **no brick or plaster dust** anywhere, including in top of window reveals."

### Builder/Multi trade

"Needed to upgrade the old Henry Hoover we use - this is perfect. We fit **Timber/PVC doors/windows** etc and use these on each job to help with the clean up at the end. Always lifts all the mess, no issues!"

### Joiner/Carpenter

"First ever Henry purchase, used many over the years, **I'm within the building trade**, and its perfect, small enough to hoof around, very powerful, easy to use."

### Builder/Multi trade

"Brilliant Hoover, picks up **bits of bricks and all sorts**, robust and light."

### Builder/Multi trade

"This is my third Henry the last one lasted 15 years and had been excellent until the end, with a heavy heart I sadly said goodbye to my trusted working companion, after several days of mourning I built up the courage to purchase a new Henry !! The new model is superb quieter with a better suction excellent Hoover these really are **the rolls Royce of building world.**"

### Joiner/Carpenter

"Best vac for **building and workshop muck**. I'd recommend this model over the eco one that's a bit smaller and cheaper as is better built. I have a £500 Dewalt m class dust extractor but **prefer my trusty Henry's.**"

### Builder/Multi trade

"Fantastic little bit of kit. **Handy to keep in the van**. Suitable to tidy up after all aspects of our jobs in the **construction industry** and very reasonably priced. Would definitely recommend."

### Plumbing/Heating Engineer

"This Hoover performs on all levels. It hoovers domestic dirt. It also has no problem **getting rid of rubble and building waste**. Very sturdy design so it doesn't break too easily. As a **commercial and industrial** plumber pipe fitter I recommend this product."

# Why Buy TRM240

Numatic

## Performance

- Low-Flow indicator operates when airflow drops due to blockage, or a full bag
- Secure blanking cap, to retain dust within the machine when the hose is disconnected
- Site compliant M-Class for the trades and 'builders clean' contractors
- Occupational exposure limit value of 0.1mg/m<sup>3</sup> (silica dust)
- HEPA14 is x10 better than HEPA13 filtration

## Durability

- 2 Year Commercial Warranty

## Sustainability

- 620W motor, high efficiency, low energy

## Value

- Best value "M-Class" vacuum
- Long-Lasting

## Ease of Use

- Easy and simple cable storage
- Lightweight and easy to use
- 9L capacity

# TRM240 Key Features

Numatic

## Low Flow Indicator

## 3 Levels of Filtration

## Tool Storage

On-board tool storage

## Specifications

<b>9L</b> Capacity	<b>620W</b> Motor	<b>8.3KG</b> Capacity
<b>Type M</b> Filtration Class	<b>48L/Sec</b> AirFlo	
<b>2300mm</b> Suction	<b>10m</b> Power Cord	

- ✓ Washable HEPA14 Filter
- ✓ 2.8m Long Reach Hose
- ✓ Rewind Cable Storage
- ✓ 10m Hi-Vis Cable
- ✓ Universal Power Tool Adaptor

# HEPA 14 vs HEPA 13

The main difference between HEPA 13 and HEPA 14 filters lies in their efficiency levels. HEPA 13 filters capture at least 99.95% of particles that are 0.3 microns or larger, while HEPA 14 filters capture at least 99.995% of such particles. This indicates that HEPA 14 filters are more efficient than HEPA 13 filters.

Criteria	HEPA 13 Filter	HEPA 14 Filter
Efficiency Level	≥99.95%	≥99.995%
Particle Size	0.3 microns	0.1 microns
Intended Use	Residential/Commercial use	Specialized applications (cleanrooms, hospitals, labs)

Another distinction is their intended usage. HEPA 13 filters are commonly found in residential and commercial air purifiers, vacuum cleaners, and HVAC systems. In contrast, HEPA 14 filters are typically used in specialized environments such as cleanrooms, hospitals, and laboratories where extremely clean air is required.

## 3 out of 4 of our 'Dare to Compare' M-Class vacuums had reviews favouring Henry.

### V-Tuf MINI HSZ – Powertoolworld.co.uk

“Not what I expected from a 110volt hoover **unlike the Henry** . Constantly blocking and not site friendly only used it once and not really happy at all.”

### Trend T32 - Amazon

“**The Henry would wipe the floor with it** Hepa or not, bad for Trend I expected a lot better! Once again I feel I've been took in by polished sales videos.”

### MAXVAC Dura DV15-MB – Dustarrest.com

“Not as good as I expected. Tool accessories are left inside the casing, so you have to take off the top and pull out the bag to get to them. In other manufacturers' designs, the tool accessories sit on the outside Also, the tube where it meets the bag blocks very easily. This is due to a slightly angled plastic guard to point the tube into the bag. Most hoovers of this type have a straight connection into the bag. So as a tradesman, who has to hoover everything from dust to small bits of rubble and debris, the small bits of rubble/debris will prove a problem. All in all, I've moved away from the Screwfix hoover, because they stopped selling the bags. **Should have bought a Henry** Hoover.”
